

FIRE ALARM SYSTEMS

www.superiorgroup.ie

A Fire alarm system is mandatory in the workplace environment we can take it that all workplaces should have arrangements for detecting fire. Irish Standard (IS 3218) gives a basis for assessing what type of detection system will be appropriate for a workplace and will also give guidance of its installation.

Fire Detection Checklist:

Where necessary, is a fire detection and alarm system installed?

Is all fire detection and alarm equipment regularly checked?

Are there instructions for relevant employees about testing of equipment?

Are those who test and maintain the equipment properly trained to do so?

Can the existing means of detection discover a fire quickly enough to raise an alarm in time for all the occupants to escape to a safe place?

Can the means for giving warning be clearly heard and understood throughout the whole premises when initiated from any single point?

If the fire detection and warning system is electrically powered, does it have a back-up power supply?

Have you told your employees about your fire warning system, will they know how to operate it and respond to it?

Are there instructions for your employees on how to operate the fire warning system and what action they should take on hearing a warning?

Have you included the fire detection and fire warning arrangements in your emergency plan?

Superior Groups highly trained and qualified team of Engineers can make this process simple for you, from Design to Install and Service with Certification we can take the hassle out of ensuring you and your business are fully compliant with Fire Safety.
